[54] Title: Security module and method for producing forgery-proof documents.

[57] **Abstract:** According to the invention, the security module is characterized in that it has a data input port via which information can be input into the security module, in that the security module has at least two data output ports, whereby data can be output via a first data output port and then transferred to an authentication unit and whereby data can be output via a second data output port and then be transferred to a document to be issued, in that the security module has at least two combination machines, whereby a first combination machine generates a result value for the first data output port and whereby a second combination machine generates a result value for the second data output port. The invention also relates to the use of the security module in order to create forgery-proof documents.
